

We don't sell you AI. We **assemble** it around your business.

Most AI vendors sell you their one thing and hope your business fits it. We start from the outcome instead. The models and platforms underneath are commodity — anyone can buy them.

What can't be bought is the layer we build on top: your processes, your rules, your edge cases and your data, engineered in until the system behaves like it has worked at your company for years.

That layer is the difference between a demo and a result — and it is what we are paid for. Then you choose who carries the risk: we can **run the outcome for you** under an SLA, or **build the system that runs it** and hand you the keys, proven, governed and documented.

MODEL ONE

We own the outcome

You buy a result, not a project — resolved tickets, processed invoices, qualified leads. We staff it, run it under SLA, and put AI to work inside the delivery so your cost per transaction falls every quarter instead of rising with volume.

MODEL TWO

We build what owns the outcome

We engineer the system inside your environment — context, guardrails, integrations and the edge cases nobody documents — prove it against your real work, then transfer it with the governance and controls your team needs to run it safely. You keep the asset and the capability.

CAPABILITIES

AI Consulting & Strategy

Establishing where AI pays, whether you're ready for it, and how you stay in control of it.

- AI Readiness Assessment
- AI Opportunity Identification
- AI Strategy & Roadmap
- AI Governance Advisory

AI Agents & Intelligent Systems

Building systems that do the work — with defined authority, escalation paths and an audit trail.

- AI Agent Development
- Conversational AI & Assistants
- AI Workflow Automation
- AI Integrations

Digital Enablement

The digital surfaces and applications the AI has to live inside to be worth anything.

- Website & Digital Presence
- Business Applications & Portals

Managed Business Operations

Running the work under SLA, with AI embedded in delivery under human supervision.

- Business Process Operations
- AI-Assisted Operations
- Customer support & service
- Back-office & finance ops

BIZDAPTIVE — COMING SOON

The control layer for organisations running AI at scale

Everyone can build an agent. Almost nobody can govern a hundred of them. Bizdaptive is our platform for organisational context, governance and control — so AI acts with your policies, your authority limits and your institutional memory behind it. In development; early partners welcome.

- Organizational Context
- Decision Intelligence
- AI Governance & Control
- Execution Coordination
- Verification
- Memory & Learning

Where to start. A short diagnostic — readiness and opportunity in one engagement — that ends with a ranked list of what to do, what it's worth, and which of the two models fits it.
